

PRESS RELEASE

Docler Holding releases three innovative mobile applications: *Docler Browser, Docler Remote & Oranum*

Luxembourg, April 23rd, 2014 – Docler Holding is proud to announce the release of three newly developed and innovative applications for improved mobile web experience on all smartphones, tablets and smart TVs.

The aim of these developments is to create a state-of the-art environment that combines interactivity, entertainment and user-friendliness. “Our users are always asking for the best quality in services, be it video or live chat streaming, or even web browsing. They are constantly looking for great mobility solutions that can suit their lifestyles. This is why our mobile development team dedicates its time and efforts to research new ideas and technologies to fulfill users’ requirements and high quality standards”, explains László Czéró, Managing Director of Docler Holding.

The first development, the **Docler Browser**, is a free mobile browser application for iPhones and iPads, which is can be described as being ‘simply just a browser’. “The strength of Docler Browser is its fast downloading functionality, especially when it comes to HD quality video streams, live or on demand, from any websites (YouTube, Facebook...). After only 6 months of existence, we have already reached 50k users per day and 100k downloads. Our goal is to optimise it further and integrate the AirPlay solution for the Apple TV, Google TV and every Smart TVs”, states Tamás Forray, Head of Mobile and TV developments.

The second is the **Docler Remote** (via Apple’s App Store and Google Play), a free gesture controller application that allows swift navigation without touching a button. This application connects to all the existing smart TVs and will soon also work with video game consoles. The next step is to open this application to developers for free, in order to enable everyone to navigate their own site with it.

The third is the **Oranum application**, which is linked to the spiritual community oranum.com. It integrates all the different functionalities of the website: interactivity via chat and video, e-payments and private messaging. An additional feature will be added in the coming weeks: the cam2cam solution.

“There will also be another important release in the coming months, called **Docler Cam**, which will enable users to send a video/camera stream from a mobile device to a web page. They will stream in HD from their mobile phones and even from the Google Glass, which is truly a first”, adds Tamás.

Docler Holding was built on the idea of creating unique, exciting and fun services, but it became more - a vision about a brand new way of thinking ready to meet the challenges of the future. This is also what these unique mobile developments tend to achieve.

About Docler Holding

Docler Holding is a multinational enterprise, headquartered in Luxembourg since 2013, which counts more than 1000 employees worldwide. The company started in 2001 as a garage project, powered by the ideas and visions of young and enthusiastic Hungarian entrepreneurs. Today, Docler Holding has created and developed a large number of highly diversified companies, all gathered under a unique umbrella. These businesses perform and experience ongoing growth in the fields of entertainment, technology, personal development and luxury/lifestyle.
